

EECS447 Mini-project 3

For each question, **show your SQL query first**. Then, evaluate the query on the cruise tables in MySQL database, **make a screenshot, and paste it here**.

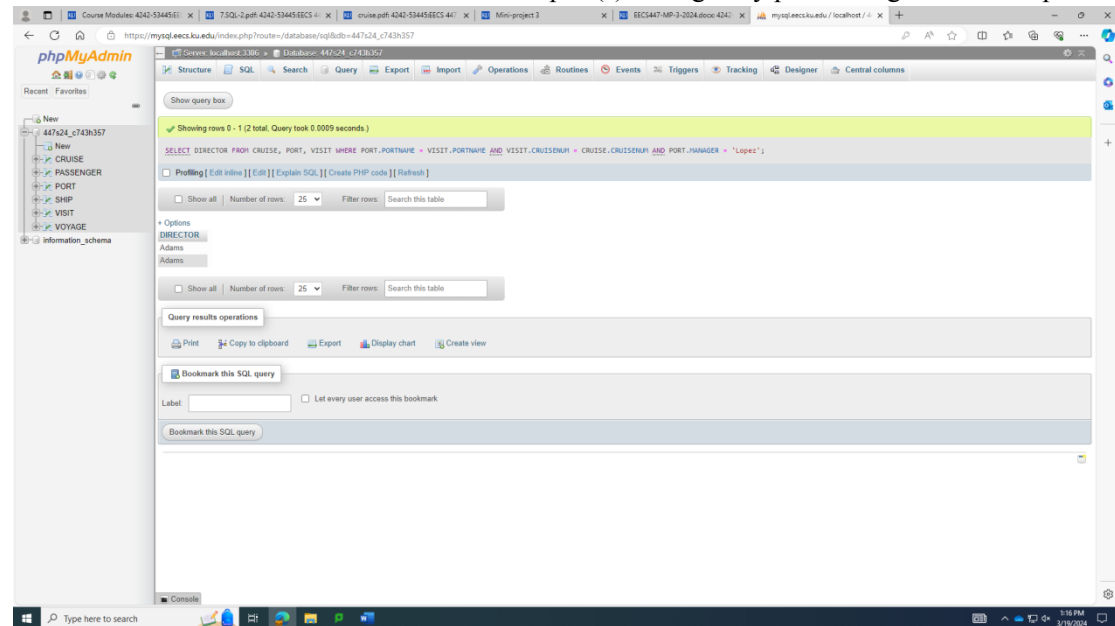

The screenshot must contain the entire HTML page, which has your database name on the left panel.

For the following questions, use join, do not use subqueries.

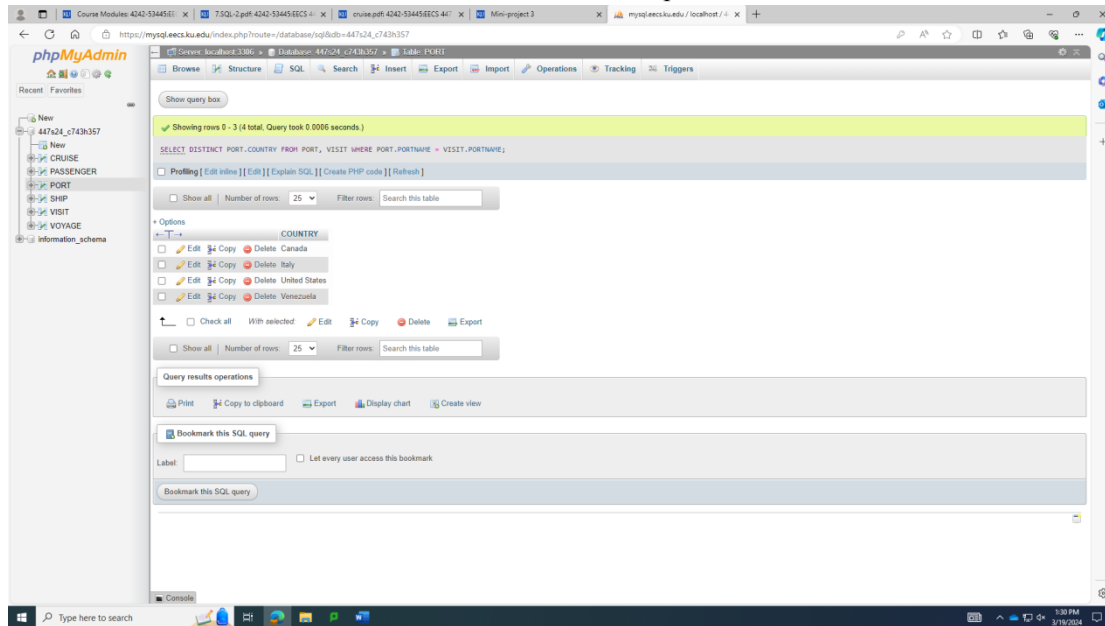

1. List the names of the cruise directors who have been on ships that weight less than 70,000

2. List the cruise directors who have visited the port(s) managed by port manager named Lopez.

3. List the names of the countries which have more than 1 ports.

4. The lost and found office at port New York found a bag. We believe that it belonged to a passenger who visited the port. We would like to ask cruise directors to contact passengers who have visited New York. Please generate all <director, passenger> pairs that need to be informed.
